

Experiment 1

Create a simple cloud software application and provide it as a service using any Cloud Service Provider to demonstrate Software as a Service (SaaS).

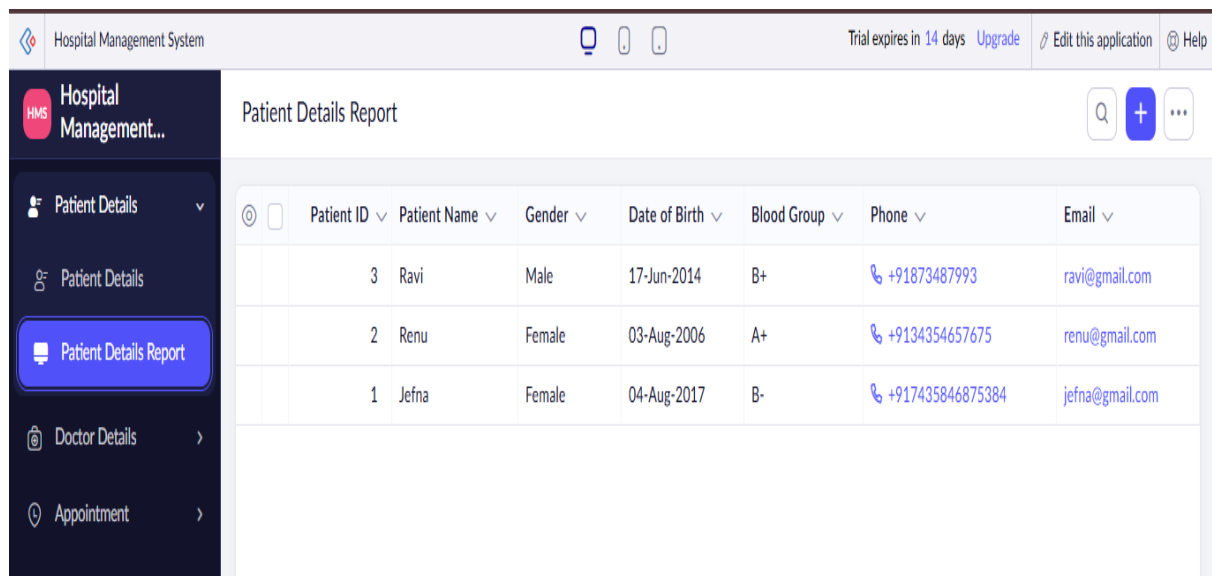

Aim

To create a cloud-based **Hospital Management System** using **Zoho Creator** and demonstrate the **Software as a Service (SaaS)** model.

Procedure

1. Log in to **Zoho Creator** using a valid user account.
2. Create a new application and name it **Hospital Management System**.
3. Create a **Patient Details** form and add the required fields to store patient information.
4. Create a **Doctor Details** form and add the required fields to maintain doctor information.
5. Create an **Appointment** form to record patient appointments.
6. Configure **Lookup** fields in the Appointment form to link patients and doctors.
7. Save all the forms and allow Zoho Creator to generate the corresponding reports.
8. Enter sample patient, doctor, and appointment records into the application.
9. Verify that all records are stored correctly and displayed in the reports.
10. Access the application through a web browser to demonstrate that it is available as a cloud-based Software as a Service (SaaS).

Output:

The screenshot displays the Zoho Creator interface for a 'Hospital Management System'. The top navigation bar includes the application name, mobile app icons, and a trial expiration notice. The left sidebar contains a menu with 'Patient Details', 'Patient Details Report', 'Doctor Details', and 'Appointment'. The main content area shows a 'Patient Details Report' table with columns for Patient ID, Patient Name, Gender, Date of Birth, Blood Group, Phone, and Email. The table contains three rows of sample data.

Patient ID	Patient Name	Gender	Date of Birth	Blood Group	Phone	Email
3	Ravi	Male	17-Jun-2014	B+	+91873487993	ravi@gmail.com
2	Renu	Female	03-Aug-2006	A+	+9134354657675	renu@gmail.com
1	Jefna	Female	04-Aug-2017	B-	+917435846875384	jefna@gmail.com

Result

Thus, a cloud-based **Hospital Management System** was successfully created using **Zoho Creator**. The application stores hospital information in the cloud and can be accessed through a web browser, thereby demonstrating the **Software as a Service (SaaS)** model.
