

SIMATS ENGINEERING
ASSESSMENT TOOL 1: Experiments

COURSE NAME: Cloud Computing and
Big Data Analytics

COURSE CODE: CSA1596

COURSE OUTCOME COVERED

CO3: *Implement cloud-based solutions using cloud storage, web APIs, and platform services for real-world applications. (BL3)*

Assessment Tool Weightage: 40%

Dave's Taxonomy: Precision (Level 3)
Question Count: 4

Total Marks: 40

Duration : 60 Minutes

Code of Conduct

I _____ (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.

I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student: _____

Experiments Rubric

Criteria	Weightage	Level 4 - Exemplary	Level 3 - Proficient	Level 2 - Developing	Level 1 - Beginning
Experimental Design	25%	Design is systematic and technically strong	Mostly correct design	Basic design with gaps	Poorly designed activity
Use of Tools / Platforms	20%	Appropriate and effective use of cloud tools	Good tool usage with minor issues	Limited tool usage	Incorrect or missing tool usage
Application of Concepts	20%	Concepts are applied accurately to practical tasks	Mostly accurate application	Partial application	Weak application
Analysis and Output	20%	Strong analysis and meaningful outcome interpretation	Good analysis with minor gaps	Basic analysis	Little or no analysis
Documentation	15%	Clear, structured, and complete documentation	Mostly complete documentation	Partially complete	Poor documentation

Total Marks Awarded:

Assessment Tasks-1

Experiments

Experiment 1: Create a simple cloud software application for Library book reservation system for SIMATS library using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Title of the book, author, publications, Year, edition, no of copies, Rack no, status (taken/returned) etc.

Experiment 2: Create a simple cloud software application for Payroll Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Name of the employee, experience in present org , over all experience, basic pay, HRA, DA, TA, net pay, gross pay etc.

Experiment 3: Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux). Create a Virtual Machine with 1 CPU, 2GB RAM and 15GB storage disk using a Type 2 Virtualization Software.

Experiment 4: Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux). Create a Cloning of a VM and Test it by loading the Previous Version/Cloned VM

Assessment Tasks-2

Experiments

Experiment 1: Create a simple cloud software application for Hospital information system for SIMATS Hospital using any Cloud Service Provider to demonstrate SaaS with fields of patient name, age, address, phone, email, Attender name, attender phone, doctor name, diseases, etc.

Experiment 2: Create a simple cloud software application for online super market using any Cloud Service Provider to demonstrate SaaS with the template of customer name, address, phone, email, items, quantity etc. with the item classification form.

Experiment 3: Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux). Create a Virtual Machine with 3 CPU, 10GB RAM and 10GB storage disk using a Type 2 Virtualization Software.

Experiment 4: Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux). Create a Snapshot of a VM and Test it by loading the Previous Version/Cloned VM.

Assessment Tasks-2

Experiment 1

Create a simple cloud software application for Hospital information system for SIMATS Hospital using any Cloud Service Provider to demonstrate SaaS with fields of patient name, age, address, phone, email, Attender name, attender phone, doctor name, diseases, etc.

Aim

To create a cloud-based **Library Book Reservation System for SIMATS Library** using **Zoho Creator** and demonstrate the **Software as a Service (SaaS)** model.

Procedure

1. Log in to **Zoho Creator** using a valid user account.
2. Click **Create New Application** and name it **Hospital Management System**.
3. Create a **Patient Details** form and add fields such as Patient ID, Patient Name, Age, Gender, Phone Number, Address, Blood Group, and Disease.
4. Create a **Doctor Details** form and add fields such as Doctor ID, Doctor Name, Specialization, Phone Number, Email, and Consultation Fee.
5. Create an **Appointment Details** form and add fields such as Appointment ID, Patient (Lookup), Doctor (Lookup), Appointment Date, Appointment Time, and Appointment Status.
6. Configure the **Lookup** fields to link the Appointment Details form with the Patient Details and Doctor Details forms.
7. Save all the forms and allow Zoho Creator to automatically generate the corresponding reports.
8. Enter sample patient, doctor, and appointment records into the application.
9. Verify that all the entered records are displayed correctly in their respective reports.
10. Access the application through a web browser to demonstrate **Software as a Service (SaaS)** using the cloud platform.

Output

1	03-Aug-2026	14:13:53	General Checkup	Pending	2	1

Result: Thus, a cloud-based **Library Book Reservation System for SIMATS Library** was successfully created using **Zoho Creator**. The application stores book details, student information, and reservation records in the cloud and can be accessed through a web browser, thereby demonstrating the **Software as a Service (SaaS)** model.

Experiment 2

Create a simple cloud software application for online super market using any Cloud Service Provider to demonstrate SaaS with the template of customer name, address, phone, email, items, quantity etc. with the item classification form.

Aim

To create a cloud-based **Online Super Market** application using **Zoho Creator** and demonstrate the **Software as a Service (SaaS)** model.

Procedure

1. Log in to **Zoho Creator** using a valid user account.
2. Create a new application and name it **Online Super Market**.
3. Create a **Customer Details** form and add the required fields to store customer information.
4. Create an **Item Classification** form and add the required fields to classify supermarket items.
5. Create an **Item Details** form and add the required fields to maintain item information.
6. Create an **Order Details** form to record customer orders.
7. Configure **Lookup** fields to link the item details with item classification and the order details with customer and item details.
8. Save all the forms and allow Zoho Creator to generate the corresponding reports.
9. Enter sample customer, item, and order records into the application.
10. Verify that all records are stored correctly and displayed in the reports.
11. Access the application through a web browser to demonstrate that it is available as a cloud-based **Software as a Service (SaaS)**.

Result

Thus, a cloud-based **Online Super Market** application was successfully created using **Zoho Creator**. The application stores customer, item classification, item, and order details in the cloud and can be accessed through a web browser, thereby demonstrating the **Software as a Service (SaaS)** model.

Experiment 3

Aim

To demonstrate virtualization by installing a Type-2 Hypervisor, creating and configuring a virtual machine with 3 CPU cores, 10 GB RAM, and 10 GB virtual storage using Oracle VirtualBox.

Procedure

1. Download and install Oracle VirtualBox on the host operating system.
2. Download the Ubuntu Linux ISO image.
3. Open VirtualBox and create a new virtual machine.
4. Select Linux as the operating system.
5. Allocate 10 GB (10240 MB) RAM.
6. Assign 3 CPU cores to the virtual machine.
7. Create a 10 GB virtual hard disk.
8. Attach the Ubuntu ISO file to the virtual machine.
9. Start the virtual machine and install Ubuntu Linux.
10. Verify that the virtual machine boots successfully.

Ouput:

Result

Thus, Type-2 virtualization was successfully demonstrated by installing Oracle VirtualBox on the host operating system. A virtual machine was created and configured with 3 CPU cores, 10 GB RAM, and a 10 GB virtual hard disk, and the Ubuntu Linux operating system was installed successfully. Hence, the virtual machine was created and executed successfully.

Experiment 4

Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux). Create a Cloning of a VM and Test it by loading the Previous Version/Cloned VM

Aim

Clone your existing Ubuntu Virtual Machine and prove that the cloned VM works.

Procedure

- 1. Open Oracle VM VirtualBox on the host operating system.**
- 2. Ensure the existing virtual machine (Ubuntu VM) is in the Powered Off state.**
- 3. Select the Ubuntu VM from the left panel.**
- 4. Click Machine → Clone (or right-click the VM and select Clone).**
- 5. Enter a name for the cloned virtual machine (e.g., Ubuntu Clone).**
- 6. Click Next and choose Full Clone as the cloning type.**
- 7. Keep the default MAC Address Policy and click Finish.**
- 8. Wait until the cloning process is completed successfully.**
- 9. Verify that the cloned virtual machine appears in the VirtualBox Manager.**
- 10. Select the Ubuntu Clone and click Start.**
- 11. Wait for the cloned VM to boot and verify that the operating system loads successfully.**
- 12. Shut down the cloned virtual machine after testing.**

Output:

Result

The virtual machine was successfully cloned using Oracle VM VirtualBox, and the cloned VM was tested successfully by booting into the Ubuntu operating system.
